

The importance of environmental monitoring and observation in meeting evidence needs

UKEOF Conference 27th February 2020

Robert Bradburne. Deputy Chief Scientific Adviser, Defra.

The world is changing

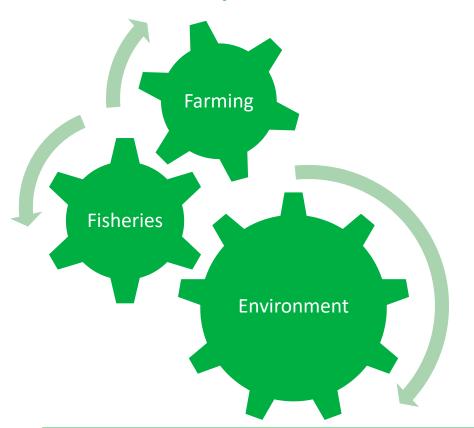

The Environment

IPBES

IPCC

Both showing rapid change

Policies and politics

Public awareness of a range of issues relatively high

Technology with Tradition

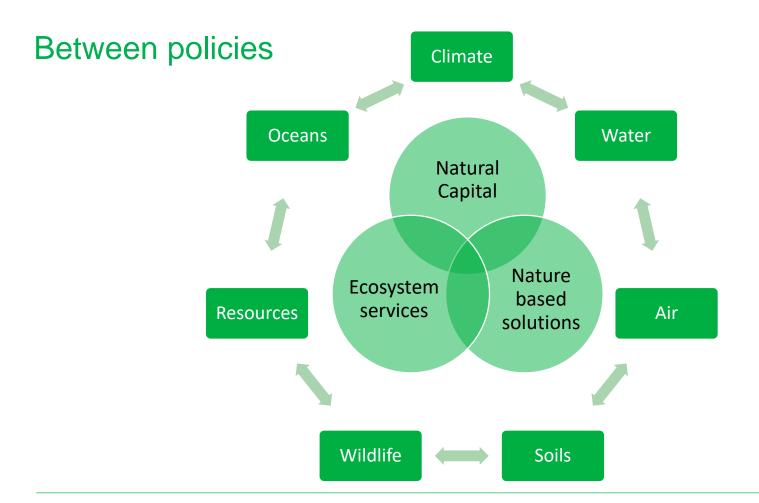

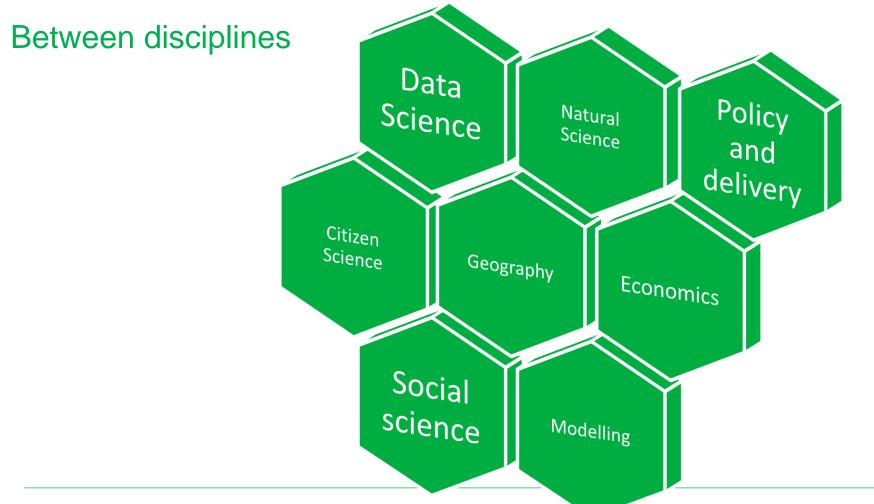

Making the links

Between Countries

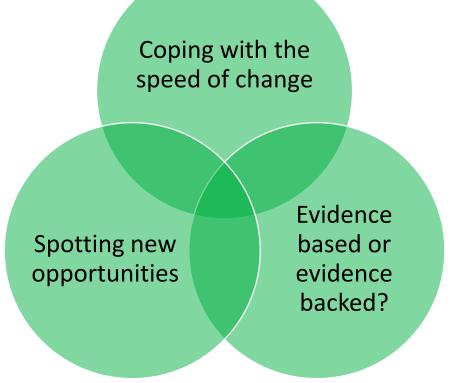

Across the UK

Exploring global linkages

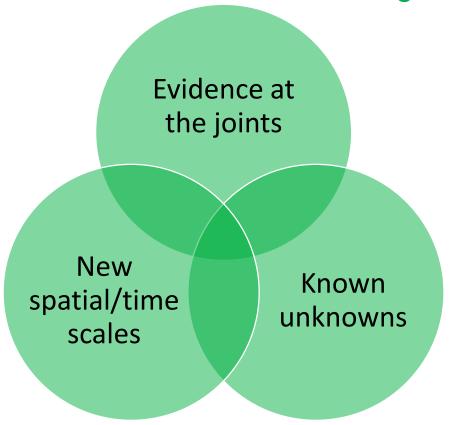

How can environmental monitoring adapt to the changing policy and delivery landscape?

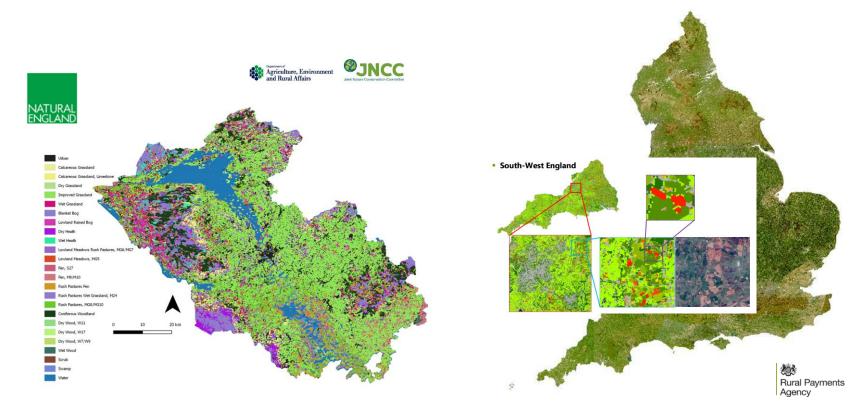

What are the new data we will need to understand change?

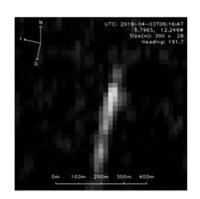

e.g., soil biology and function

What new or better targeted insights can we provide?

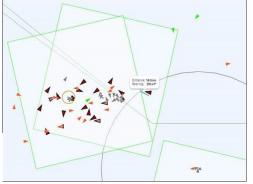

Where can technology significantly change the way that Government operates?

SAR detection of a tuna longliner (DVWF) from Ascension. Image Credit: OceanMind

Centre for Environment Fisheries and Aquaculture Science

Flood prediction and response

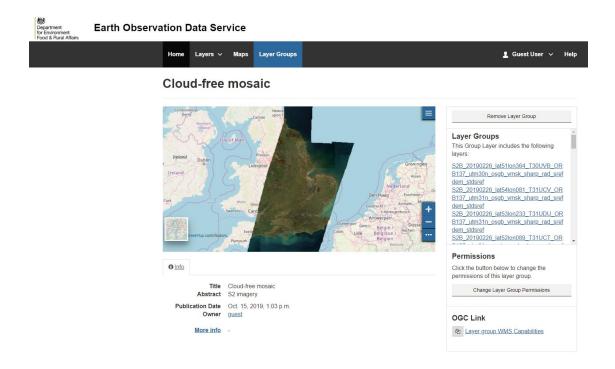

predicting recently planted forest

13

units

Don't forget the infrastructure..... and the people

How can UKEOF help us rise to the challenge ahead?
